Hybrid Canola

TRAPPER is a non-Genetically Modified, MSL, spring canola hybrid. Rapid establishment is a characteristic of this hybrid resulting in excellent early canopy development. TRAPPER has enhanced disease resistance, offers a dense pod set and excellent oil content.

KEY CHARACTERISTICS

- Vigorous spring establishment
- High yield potential
- Early Maturity
- Good Resistance to Blackleg
- Excellent Shatter Tolerance
- Suitable for Direct Harvesting
- Short height
- Mid oleic oil profile
- Very High Oil Content and excellent test weight
- Relatively large seed size
- High germination and purity rate
- Developed by NPZ
