***Hornet** is a medium maturity conventional winter canola hybrid with excellent winter hardiness and vigorous spring regrowth potential. Hornet has consistently delivered above average yields in the PNW, Southern Great Plains and Midwest. This hybrid responds well in heavier soils.*

### KEY CHARACTERISTICS

- High yield potential
- Excellent winter hardiness
- Medium maturity
- Good standability
- Responsive to fungicides in humid environments
- Good blackleg resistance
- Typical height 49" - 59"
- Large seed size
- High germination and purity
- Above average oil content
- Adaptable to wide row production
- Large canopy hybrid – excellent interlocking for direct harvesting
- Commercial release 2007
- Developed by
