***JANOSH** is a non-GM, conventional fully restored winter canola hybrid, demonstrating robust cold tolerance, with a medium to late start of flowering in Spring to mitigate late spring freezes. Janosh features excellent plant health with high tolerance to Blackleg, Verticillium, and resistance to TuYV, which translates into late season plant health and excellent lodging resistance. Janosh offers strong yield potential and high oil content.*

KEY CHARACTERISTICS

- Vigorous fall root development that supports tolerance to drought
- Traited with Turnip Yellow Virus Resistance (TuYv) with enhanced tolerance to pod shatter
- Late season plant health
- Strong lodging resistance with dense pod canopy and strong yield potential.
- Excellent winter hardiness
- Medium-late maturity
- High oil content
- Particularly suited to high yield and/or irrigated environments
- Eligible for Non-GM premiums.
- High germination and purity rate
